

AMAZING MICRO CLOTH

WHY does Microfiber work?

The Amazing Micro Cloth doesn't just move dust and dirt around like ordinary cloths; it scoops up and HOLDS the dust and dirt including such tiny particles, like fingerprints, smudges, and even BACTERIA!

The thickness of micro fiber is finer than 1/100 of human hair and it is made of triangular section thread. Our Amazing Micro Cloth has over 3 billion of these wedge-shaped little grabbers to gobble up the dust, grime and soil pulled into the traps by static electricity.

The Amazing Micro Cloth is Made IN THE USA of 70% Polyester and 30% Polyamide. The yarn is PRESSED-(not woven) and composed of strings of FILAMENT and put through a special treatment process before dyeing the cloth where each filament is split into 16 sections with 16 interval spaces. Accordingly, one string of YARN has MANY thousands of strings of MICROFIBER, and the end result has 7900 denier strings of MICROFIBER per square inch!

There are millions of ultra thin microfibers and interval spaces in each cloth. Each sharply wedge-shaped microfiber makes it possible for the cloth to have such a wonderful water and dust scooping or absorption power and remain soft and easy to use. Due to the remarkable dust keeping ability, the Amazing Micro Cloth protects the reverse sticking of dust, fingerprints, smears, and water spots to the surface of hard surfaces and even eye glass lenses. In conclusion, our Amazing Micro Cloth has a scientific and efficient cleaning function structure.

Characteristics of the Amazing Micro Fiber Cloth

1. Perfect cleaning function - Ultra tiny wedge-shaped micro fibers make it possible to clean out any surface from the bottom to absorb the particles into the interval spaces of fibers and keep them in the inner spaces of cloth until being washed out. The ordinary cloth rolls over or repels some of dirty particles on surfaces, and it means it can not make some scratches or streaks to be left behind on the surfaces. Preserves the value of object by recovering the original transparency.
2. High Soft touch - The ultra fine micro fibers naturally create it. It helps avoiding hurting object's surfaces. Accordingly, microfiber cloth can be used as a cleaning towel for the skin of a baby!
3. Easy to use and RE USE! The Amazing Micro Cloth is the ONLY one that can be bleached! When the microfiber attracts and absorbs dirt it needs to be bleached to completely rid the cloth of the tiny particles. Therefore, the other microfiber cloths that cannot be bleached always hold the dirt particles, eventually finally getting too full to use efficiently.
4. Quick drying - The affluent inner spaces make it possible for the free air-ventilation through the cloth. That means also that there is no possibility of creating mold or bacteria.
5. Durability-long term use - As this cloth is made of synthetic Polyester and Nylon fiber, it is natural to have longer durability (life span) than ordinary cotton cloths.

Benefits of the Amazing Micro Fiber Cloth

1. Effective Performance. And Easy to Use ... The scientific cleaning function performs wonderfully with just water! For dust cleaning-just wipe it lightly! For heavy or greasy dirt- wet it, wring it out COMPLETELY, and wipe it!
2. Inexpensive! Cost is minimal, therefore you can afford MORE and wont have to look all over for yours every time you need it. Just grab another one!
3. Saves Time ... Don't need any more additional detergents and paper towel. Don't need to wipe it harder and repeatedly on the same surfaces. Once will finish it quickly and easily!
4. Economical ...As it works by itself or just with water, don't need any additional expenses for expensive detergents nor disposable paper towel!
5. Keep Healthy ...NO MORE HARSH CHEMICALS for home cleaning as this contributes to allergies. Amazing Micro Cloth cleaning needs only water!
6. Environmentally Friendly ...You can play a role in preserving the Earth's environment by avoiding using harmful chemical detergents and disposable cleaning products like paper towels!

**Will Not Scratch / No Chemicals Needed / No Streaks
No Water Spots / Keeps The Glare away!**

**Safe to use on Lexan, Plexiglass, fiberglass, silver, brass,
chrome, mirror, glass, and any hard surface.**
